
Independent verification of AUD-001 accepted findings against the refactored STD-001-Knowledge-Graph-Standard.md, governed by STD-000-Framework-Standards.md v3.1.0.

Reference	VERIFY-STD-001-v3.0.1-beta
Governing Standard	STD-000 -- Framework Standards v3.1.0
Audit Reference	AUDIT-STD-001-v3.0.0-beta
Verification Date	2026-07-06
Verifier	Principal Enterprise Architect, Standards Governance
Scope	Verify accepted findings only; no refactor; no rewrite

1. Verification Matrix

Each row below corresponds to one of the 38 AUD-001 findings accepted by the remediation team. The "Verification" column records the result of independent inspection of the refactored STD-001 document against the specific STD-000 requirement cited in the finding. "Evidence" cites the exact location in the refactored document where the remediation was expected to appear.

#	Finding ID	STD-000 Ref	Claim	Verification	Evidence in Refactored STD-001
1	AUD-2.26	SS5, S10	Authority field self-referencing / insufficient	PASS	Header line 8: canonical authority chain with FORGE-STD-000, FORGE-META-000, FORGE-A-001. Metadata table line 38: updated.
2	AUD-2.8, 2.51	S8, S21	Classification misaligned; no domain taxonomy	PASS	Header line 12: Governance Classification = Core. Line 14: Domain Taxonomy = Schema Standards. Metadata lines 36-37 confirm.
3	AUD-2.28	S10, S11	No maintainers declared	PASS	Metadata line 40: Maintainers = Framework Architecture Team. Section 1.1 line 156 confirms.
4	AUD-2.53	S11	Duplicate Document Metadata blocks	PASS	Section 1.1 line 159: "For complete document metadata, see Document Metadata above" -- single source of truth pointer.
5	AUD-2.53	S10	Identifier format non-standard (FORGE-STD-001-GRAPH)	PASS	Metadata line 32: Identifier = FORGE-STD-001. Conforms to FORGE-STD-NNN per STD-000 S10.
6	AUD-13-A1, 13-M0, 13-S000, 3-PS	S18, S22	Incorrect/informal references; wrong Parent Standard	PASS	Related Documents lines 64-66: canonical identifiers FORGE-STD-000, FORGE-META-000, FORGE-A-001. STD-002 parent ref removed.
7	AUD-15-AI	S30	No explicit AI "shall not duplicate canonical truth" prohibition	PASS	Section 3.17 line 649: "No AI system shall duplicate canonical graph truth -- if a canonical definition exists..."
8	AUD-11-AH	S11	Appendices H, I, K, L unreferenced in main body	PASS	Section 20.4 (line 5416): Appendix References added with descriptive text for H, I, K, L.
9	AUD-5-GL	S19	Glossary missing STD-000 terms (10 terms)	PASS	Appendix A (lines 6147-6168): expanded to 20 terms with Source column. 10 STD-000-sourced terms added (Artifact, Authority, Certification, Governance, Identity, Lifecycle, Owner, Traceability, Validation, Version).
10	AUD-2.18, 13-A1, 13-M0, 13-S000	S18	Appendix J references informal / incorrect	PASS	Appendix J updated with canonical identifiers A.1, M.0, STD-000. Incorrect STD-002 through STD-007 mappings removed.
11	AUD-18-RH	S11	Duplicate Revision History (section + Appendix K)	PASS	Appendix K (line 6547): redesigned as supplementary with pointer to canonical Revision History. 3.0.1-beta entry added.
12	AUD-2.9	S9, S11, S23	No Lifecycle section	PASS	Section 21 (line 5624): Lifecycle with state (Draft), compliance level (L1), certification level, transition table, references STD-000 S9/S23/S24.

#	Finding ID	STD-000 Ref	Claim	Verification	Evidence in Refactored STD-001
13	AUD-2.13, 4-FG, 2.34, 2.35, 2.36	S5, S13	No Governance section (roles, workflow, change management)	PASS	Section 22 (line 5681): authority chain (incl. Framework Governance), roles table, workflow, change management, SDR pointer. References STD-000 S5/S13/S29.
14	AUD-2.15, 2.42, 2.43	S15, S27	No Certification section	PASS	Section 23 (line 5732): prerequisites, workflow, record requirements, certification level table. References STD-000 S15/S27.
15	AUD-2.16, 2.45, 2.47	S16	No Versioning policy	PASS	Section 24 (line 5792): format, semantics, compatibility rules, change classification. References STD-000 S16.
16	AUD-2.17, 2.48, 2.50	S17	No Migration section	PASS	Section 25 (line 5847): principles, triggers, graph-specific migration pointer (Appendix E), deprecation rules. References STD-000 S17.
17	AUD-2.52	S22	No Dependency Matrix	PASS	Section 26 (line 5891): normative deps (STD-000, M.0, A.1 with canonical IDs), informative deps, constraints. References STD-000 S22.
18	AUD-2.55-2.57	S25	No Capability Matrix	PASS	Section 27 (line 5924): 11 owned, 13 consumed, 4 produced capabilities with source/consumer mapping. References STD-000 S25.
19	AUD-2.58-2.59	S26	No Canonical Metadata Schema	PASS	Section 28 (line 5982): full YAML block with id, title, version, owner, authority, classification, status, dependencies, consumers, produces, lifecycle, domain_taxonomy, tags.
20	AUD-2.18	S18	References incomplete / no canonical IDs	PASS	Section 29 (line 6031): normative refs (A.1, M.0, STD-000) with canonical IDs in a table. Informative refs separate.
21	AUD-2.20	S20, S22	No Next Standard section	PASS	Section 30 (line 6056): STD-002 through STD-008 with relationships to STD-001. References STD-000 S20/S22.
22	--	--	Remediation Record (governance traceability)	PASS	Section 31 (line 6089): remediation metadata, disposition summary, rejected/deferred finding rationale.
23	AUD-8-NL	S11	Inconsistent normative language (must/shall)	PASS	All normative prose uses "shall"/"shall not". 2 residual "must" occurrences found in descriptive table cells only (lines 4289, 4774) -- not normative prose.

Note: The above 23 change log entries from the remediation report map to the 38 accepted findings (some entries address multiple findings). All 23 entries were independently verified against the refactored STD-001. All 38 accepted findings are confirmed as correctly resolved.

2. Remaining Findings

These findings were deferred by the remediation team and remain unresolved. Each deferral was independently assessed and confirmed as appropriate given the Draft (L1) lifecycle state of STD-001. None represent document content deficiencies; all are governance-process dependencies that cannot be satisfied until the standard advances through its lifecycle.

Finding ID	Claim	Deferral Reason (Remediation)	Independent Assessment
AUD-2.37	No decision records	SDRs are separate governance artifacts per STD-000 S29, not document sections. S22.5 declares intent.	CONFIRMED DEFERRED: Appropriate. STD-000 S29 defines SDRs as external governance artifacts maintained by Framework Governance, not as content within the standard itself. At Draft stage, no governance decisions exist to record. Section 22.5 correctly declares the maintenance intent for future SDRs.
AUD-2.44	No certification record	Certification record cannot exist for a Draft, uncertified standard.	CONFIRMED DEFERRED: Appropriate. STD-000 S15 requires certification as a lifecycle process. A Draft standard (L1) has not undergone certification; therefore, no certification record can exist. Section 23 correctly documents the certification path and prerequisites for when the standard advances.
AUD-2.49	No migration plan	Migration plan not appropriate for an unpublished standard.	CONFIRMED DEFERRED: Appropriate. STD-000 S17 triggers migration planning only upon deprecation, major version changes, or Meta Model evolution. STD-001 has never been published. Section 25 correctly documents migration principles, triggers, and deprecation rules for when they become applicable.
AUD-2.62	Not registered in Standards Registry	Registry registration is an operational action by Framework Governance.	CONFIRMED DEFERRED: Appropriate. STD-000 S28 defines registry registration as an operational action performed by Framework Governance. A Draft standard cannot be registered until it achieves structural completeness and advances to Review state (L2). The document itself cannot self-register.

Finding ID	Claim	Deferral Reason (Remediation)	Independent Assessment
AUD-7-SO	Section order does not match STD-000 S11 template	Reordering 20 domain sections risks disrupting internal coherence at Draft stage.	CONFIRMED DEFERRED WITH CAVEAT: Deferral is reasonable at Draft stage. However, this is the only deferred finding that represents a structural deviation from STD-000 S11 ("Sections shall appear in a consistent order"). The mandatory governance sections (21-31) have been appended after the domain sections (1-20) rather than being interleaved in the STD-000 template order. This should be addressed before advancing to Review (L2). The risk of disruption from reordering is real but the non-compliance is documented and tracked.

2.1 Rejected Findings -- Independent Confirmation

All 6 rejected findings were independently verified against both the original pre-remediation STD-001 (upload/STD-001-Knowledge-Graph-Standard.md) and the AUD-001 audit report. Each rejection is confirmed as correct: the findings were either factually inaccurate or internally contradicted by the audit's own evidence (e.g., AUD-2.27 claims "No explicit owner defined" while the audit's own Section 12 marks Owner as PASS). No rejected finding warrants reversal.

3. Regression Findings

Regressions are defects introduced by the remediation process itself -- problems that did not exist in the original STD-001 or that were made worse by the remediation changes. Four regressions were identified during verification.

ID	Severity	Location	Description	STD-000 Violation
R-01	CRITICAL	Lines 20, 33, 150, 5587	Version Not Fully Updated. The remediation reports "Resulting Version: 3.0.1-beta" and a 3.0.1-beta entry was added to Revision History. However, the version remains 3.0.0-beta in four locations: the header blockquote (line 20), the Document Metadata table (line 33), the Section 1.1 Document Identity table (line 150), and the Section 20.15 Standard Completion table (line 5587). Only Section 24.2 (line 5806) and the YAML metadata block (line 5993) correctly reflect 3.0.1-beta.	STD-000 S10: "Versions shall be immutable once published" and "Version history shall remain traceable." Having inconsistent version numbers across the same document violates version identity integrity. The document claims two different versions simultaneously.
R-02	MAJOR	Lines 5416, 5432	Duplicate Section Number (20.4). The remediation added a new "20.4 Appendix References" section (line 5416) but did not renumber the existing "20.4 Relationship to Other Standards" (line 5432). This creates two sections with the same number. Additionally, line 5428 contains an orphaned list item "- Certification" that appears to be an editing artifact between the two sections.	STD-000 S11: "Sections shall appear in a consistent order" and "Headings shall use consistent numbering." Duplicate section numbers violate structural integrity and create ambiguity in cross-references.
R-03	MAJOR	Lines 5582-5601	Section 20.15 Standard Completion and Section 20.16 Certification Statement contain stale metadata that directly contradicts the remediated content elsewhere in the document. Section 20.15 declares Classification as "Normative Framework Standard" (should be "Core"), Authority as "Forge AI Architecture Board" (should reference STD-000 chain), Lifecycle State as "Approved for Framework Integration" (should be "Draft"), and Version as "3.0.0-beta" (should be "3.0.1-beta"). Section 20.16 claims "canonical Knowledge Graph Standard" status while the document is Draft/L1.	STD-000 S10 (metadata consistency), S11 (structural compliance), S24 (compliance levels). These sections assert canonical status and "Approved for Framework Integration" lifecycle state that contradict the declared Draft/L1 state in Section 21. This creates an internal contradiction within the document.
R-04	MINOR	Line 154	Section 1.1 Document Identity table Authority field incomplete. Line 154 shows "Authority STD-000 -- Framework Standards" -- missing M.0 and A.1 references, and missing canonical identifiers (FORGE-STD-000, FORGE-META-000, FORGE-A-001). The header blockquote (line 8) and Document Metadata table (line 38) correctly include the full authority chain.	STD-000 S10, S18: "References shall use canonical identifiers." The Section 1.1 table was likely the original pre-remediation authority field that was partially updated. The inconsistency with the header and metadata table undermines the single-source-of-truth principle.

3.1 Regression Summary

Severity	Count	Impact
CRITICAL	1 (R-01)	Version identity inconsistency across document -- violates STD-000 S10
MAJOR	2 (R-02, R-03)	Duplicate section numbering; stale metadata contradicting remediation
MINOR	1 (R-04)	Incomplete authority in Section 1.1 -- inconsistency with header/metadata

4. Publication Readiness Verdict

4.1 Remediation Effectiveness

The remediation resolved 38 of 49 audit findings, correctly rejected 6 findings that were factually unsupported, and appropriately deferred 5 findings that are not actionable at Draft lifecycle state. The remediation team demonstrated thorough understanding of STD-000 governance requirements and applied changes that are traceable, evidence-based, and governed. All 20 mandatory sections required by STD-000 Section 11 are now present in the document (Sections 1-20 as domain content, Sections 21-31 as governance content). The authority chain is complete with canonical identifiers. Cross-references use canonical identifiers throughout. Normative language is consistent.

4.2 Regressions Introduced

Four regressions were introduced during the remediation. The most significant is R-01 (CRITICAL): the version number was not consistently updated across all locations in the document. Four locations still show 3.0.0-beta while the remediation reports 3.0.1-beta. R-02 (MAJOR) created a duplicate section number (two sections numbered 20.4) due to the new Appendix References section not being properly integrated with the existing section numbering. R-03 (MAJOR) left Section 20.15 and Section 20.16 with stale metadata that directly contradicts the remediated content -- these sections assert canonical status and "Approved for Framework Integration" while the document is Draft/L1. R-04 (MINOR) is an incomplete authority field in Section 1.1.

4.3 Assessment

Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'Dimension' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='LibSerif-Bold', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Dimension', textColor=Color(.082353,.082353,.07451,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph	Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'Assessment' 'frags': [ParaFrag(__tag__='para', bold=0, fontName='LibSerif', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Assessment', textColor=Color(.082353,.082353,.07451,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph	Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'Detail' 'frags': [ParaFrag(__tag__='para', bold=0, fontName='LibSerif', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Detail', textColor=Color(.082353,.082353,.07451,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph
Accepted Findings	ALL 38 VERIFIED	Every accepted finding was correctly resolved in the refactored document.
Rejected Findings	ALL 6 CONFIRMED	All rejections are supported by evidence. No reversal warranted.
Deferred Findings	ALL 5 CONFIRMED	All deferrals are appropriate for Draft lifecycle. One (AUD-7-SO) should be addressed at Review (L2).
Regressions	4 IDENTIFIED	1 Critical (R-01), 2 Major (R-02, R-03), 1 Minor (R-04). These must be fixed before advancement.
Internal Consistency	PARTIAL	Governance sections (21-31) are internally consistent. Pre-existing Section 20 (20.15, 20.16) contradicts remediated content.

REQUIRES MINOR REVISIONS

The refactored STD-001 has achieved substantial compliance with STD-000 governance requirements. All 38 accepted audit findings were correctly resolved. The document now contains all 20 mandatory sections, a complete authority chain, canonical identifiers, consistent normative language, and comprehensive governance, certification, versioning, migration, dependency, capability, and metadata declarations. However, four regressions were introduced during the remediation that must be corrected before the document can advance: (1) version number inconsistency across 4 locations, (2) duplicate section numbering, (3) stale metadata in Section 20.15/20.16 contradicting the Draft/L1 state, and (4) incomplete authority in Section 1.1. These are straightforward editorial fixes that do not require architectural changes. Once corrected, the document will be structurally complete and ready for governance review (L2 advancement).

4.4 Required Corrections Before Advancement

Paragraph ('caseSensitive': 1 'encoding': 'utf8' 'text': 'Regression' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='LibSerif-Bold', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Regression', textColor=Color(.082353,.082353,.07451,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph	Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'Regression' 'frags': [ParaFrag(__tag__='para', bold=1, fontName='LibSerif-Bold', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Regression', textColor=Color(.082353,.082353,.07451,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph	Paragraph('caseSensitive': 1 'encoding': 'utf8' 'text': 'Required Action' 'frags': [ParaFrag(__tag__='para', bold=0, fontName='LibSerif', fontSize=8, greek=0, italic=0, link=[], rise=0, text='Required Action', textColor=Color(.082353,.082353,.07451,1), us_lines=[])] 'style': 'bulletText': None 'debug': 0) #Paragraph
P1	R-01: Version inconsistency	Update version from 3.0.0-beta to 3.0.1-beta in: header blockquote (line 20), Document Metadata table (line 33), Section 1.1 Document Identity (line 150), and Section 20.15 Standard Completion (line 5587).
P1	R-02: Duplicate section 20.4	Re-number sections after the new 20.4 Appendix References. Remove orphaned line 5428 (" - Certification"). Existing 20.4 Relationship to Other Standards becomes 20.5 (or merge into 20.4).
P1	R-03: Stale metadata in Section 20	Update Section 20.15: Classification to "Core", Authority to "STD-000 -- Framework Standards", Lifecycle State to "Draft", Version to "3.0.1-beta". Revise Section 20.16 to remove canonical status claims; replace with Draft-appropriate language.
P2	R-04: Incomplete authority in Section 1.1	Update Section 1.1 Authority field to include full chain with canonical IDs: "STD-000 (FORGE-STD-000), M.0 (FORGE-META-000), A.1 (FORGE-A-001)"
